

## 中医药方向期刊盘点 (二)

吴敏

武汉美捷登生物科技有限公司

中医药作为我国的传统医学，为中华民族的繁荣昌盛做出了巨大的贡献。但是，西方把重分析、重实证的思维方式看作是唯一的科学思维方式。由于中医药的系统整体思维、阴阳平衡理论无法得到实证，一度被认为是伪科学。随着科学的发展，西方对中医药文化的接受度较以前要高，在 SCI 领域出现了专门接受中医药相关研究的杂志，称之为补充替代医学 (Integrative & Complementary Medicine)。现在，我们将对这一类杂志分系列进行介绍。

上篇我们介绍了 JCR 一区杂志，此次将介绍 JCR 二区杂志，一共有 7 份。

### 七、INTEGRATIVE CANCER THERAPIES ISSN: 1534-7354 IF:2.634 收稿量 141

Website: <https://us.sagepub.com/en-us/nam/integrative-cancer-therapies/journal201510>

美国 SAGE

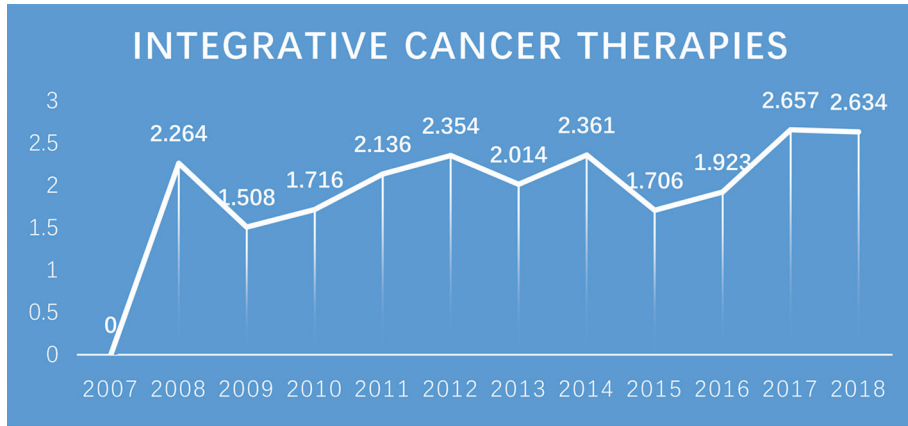

Scope

*Integrative Cancer Therapies* focuses on a new and growing movement in cancer treatment. The journal emphasizes scientific understanding of alternative and traditional medicine therapies, and the responsible integration of both with conventional health care. Integrative care includes therapeutic interventions in diet, lifestyle, exercise, stress care, and nutritional supplements, as well as experimental

vaccines, chrono-chemotherapy, and other advanced treatments.

The journal presents scientifically rigorous original research, case studies, current literature reviews, educational roundtables, and commentary on key topics such as:

- Treatment strategies
- Evaluations of current therapies
- Models for integrating complementary and conventional treatment in clinical practice
- Interventions from alternative and traditional medicine
- Implementing quality-of-life assessment and counseling in the clinical setting
- Cancer rehabilitation during and following cancer treatments
- Potential interactions of cancer chemotherapy drugs with frequently used dietary supplements
- Implementing integrative cancer care strategies into oncology practice
- Relevant molecular mechanisms and biology behind integrative approaches
- Impact of timing of chemotherapy administration on toxicity
- Response, and outcome by leading oncologists
- Researchers, and health-care professionals

## 八、BMC Complementary and Alternative Medicine ISSN: 1472-6882 IF: 2.479 收稿量 337

Website: <https://bmccomplementmedtherapies.biomedcentral.com>

英国 BMC OA 期刊

*Scope*

*BMC Complementary and Alternative Medicine* is committed to evidence-based research. We believe that Complementary and Alternative Medicine (CAM) research should be held to the same standards and evidence threshold as those of medicine research.

We welcome manuscripts for submission which meet the following research standards:

- Clinical and Basic research manuscripts that comply with international and national stand-

ards for such work (such as the Declaration of Helsinki or relevant Governmental regulation e.g. the UK's Medicines for Human Use (Clinical Trials) Regulations).

- Studies which are adequately controlled (be that compared to a placebo or conventional medicine), blinded (where appropriate), randomised and of sufficient statistical power to confidently and accurately interpret the effect reported. Studies reporting a CAM treatment/technique compared only to another CAM treatment/technique are not sufficient to test the efficacy of the CAM treatment in question. Studies in which a conventional treatment is supplemented with a CAM technique are only valid if compared to the same conventional treatment supplemented with a placebo.

journal that seeks to understand the sources and to encourage rigorous research in this new, yet ancient world of complementary and alternative medicine.

The journal seeks to apply scientific rigor to the study of complementary and alternative medicine (CAM) modalities, particularly traditional Asian healing systems. eCAM emphasizes health outcome,

while documenting biological mechanisms of action. The journal is devoted to the advancement of science in the field of basic research, clinical studies, methodology or scientific theory in diverse areas of Biomedical Sciences. The journal does not consider articles on homeopathy.

siderable appeal to anyone who seeks objective and critical information on **complementary therapies** or who wishes to deepen their understanding of these approaches. It will be of particular interest to healthcare practitioners including family practitioners, complementary therapists, nurses, and physiotherapists; to academics including social scientists and CAM researchers; to healthcare managers; and to patients.

*Complementary Therapies in Medicine* aims to publish valid, relevant and rigorous research and serious discussion articles with the main purpose of improving healthcare. The journal believes that good healthcare needs to be based on clinical judgement and the available evidence on what is safe and effective, integrating conventional and complementary therapies as appropriate.

*Complementary Therapies in Medicine* publishes a variety of articles including primary research,

reviews and opinion pieces. Recognising that some forms of CAM present novel and complex interventions, the journal encourages the exploration of the methodology of research. It believes that researchers should always aim at employing high ethical and methodological standards, and also welcomes small or exploratory studies that make a contribution to the area. Well conducted studies with negative outcomes are also welcome if they inform patient care. The journal welcomes considered opinion pieces that reflect genuine disagreements but remain respectful of the views of others.

Each issue features original, high quality research on complementary medicine, as well as information and experiences on integrating complementary medicine into mainstream care.

*Scope*

*The Journal of Alternative and Complementary Medicine: Paradigm, Practice, and Policy Advancing Integrative Health* is the leading peer-reviewed journal providing scientific research for the evaluation and integration of complementary and alternative medicine into mainstream medical practice. The

Journal delivers original research that directly impacts patient care therapies, protocols, and strategies, ultimately improving the quality of healing.

*The Journal of Alternative and Complementary Medicine: The Paradigm, Practice, and Policy Advancing Integrative Health* is a peer-reviewed journal. It includes observational and analytical reports, commentary, and perspectives on therapies currently thought to be outside the realm of conventional Western biomedicine that are gaining interest and warranting research to assess therapeutic value. The Journal includes current concepts in clinical care, which will be valuable for physicians and other health care professionals who are seeking to evaluate and integrate these therapies into patient care protocols.

A primary goal of this international peer-reviewed journal is the establishment of rigorous and appropriate research methodologies; the Journal develops and encourages publication standards to foster effective and reliable measurement, data collection, analysis, and interpretation. The Journal does not publish papers that have been submitted elsewhere.

Case Reports are no longer being considered for publication.

JACM does not publish studies containing animal models, lab-based cellular work, in silico, ex vivo, or in vitro studies, unless they are extraordinarily groundbreaking and revolutionary. The Journal does not typically publish questionnaire results, opinion, perception, attitude, or "knowledge," papers. JACM does not publish book reviews.

**Methods:** describe in detail how the study was carried out (e.g. study area, data collection, criteria, origin of analysed material, sample size, number of measurements, age and sex of participants, equipment, data analysis, statistical tests, and software used). All factors that could have affected the results need to be considered. If you cite a method described in a non- English or inaccessible publication, explain it in detail in your manuscript. Make sure that you comply with the ethical standards in respect of **patient rights, animal testing, environmental protection**, etc.

**Results:** present the new results of your study
